In this document, you will find out how to transfer the activation of Transit/TermStar from your previous computer to a new computer. You are in the right place if you use Transit/TermStar with a standalone licence and want to replace your computer.

What you should know here

**Activation key and Activation Center**

To be able to work with Transit/TermStar beyond the 30-day activation period, you must activate Transit/TermStar on your computer. To do this, you require an “activation key”, which ensures that your Transit licence can only be used on your computer. You generate the activation key yourself in the “Activation Center”. It is displayed there as the “Activation code”.

**Site Code and Machine ID**

“Site Code” and “Machine ID” are two codes which Transit/TermStar displays individually for your computer. You require these codes in the Activation Center in order to generate the activation key for the Transit/TermStar installation on your computer.

**Removal key**

Transit/TermStar creates a removal key if you deactivate Transit/TermStar. You can use the removal key in the Activation Center to release the licence that is no longer required. It is requested here as a “Removal code”.

**Transferring an activation**

If you replace your computer, the previous activation key is no longer valid for the new computer. You have to transfer the licence from your previous computer to the new computer.

Before replacing the computer, you must deactivate Transit/TermStar on the previous computer (⇒ "Deactivating Transit/TermStar", page 10). You then log into the Activation Center and release the licence that you no longer require for the
previous computer (☞ "Releasing the licence", page 12). To do this, use the removal key that you received during deactivation.

After replacing your computer, you can reactivate Transit/TermStar on the new computer: You log in to the Activation Center on the new computer and create a new activation key. You can use the activation key to activate Transit/TermStar on the new computer (☞ "Activating Transit/TermStar on a new computer", page 15).

Transfer Transit data to new computer

If you want to continue to use your existing projects and user-defined settings in Transit, you have to transfer your existing Transit installation to your new computer. In section ☞ "Transferring the existing Transit installation to your new computer", page 16, will learn how to do this.

Uninstall or just deactivate?

You have two options for deactivating Transit/TermStar:

▲ Deactivate when uninstalling
With this option, the removal key is created when you remove Transit/TermStar from your computer.
Examples:
– You have purchased a new computer and want to sell your previous computer.
– In future, you only want to use your desktop PC for DTP tasks and use your laptop for Transit/TermStar.

▲ Deactivate only; leave Transit/TermStar on the computer
With this option, Transit/TermStar remains installed on your computer. However, you can no longer use the software, because your installation is no longer active.

Licence number and activation key

Do not mix up the licence number and activation key:

▲ The licence number can be found in the e-mail containing the licence information that you received from STAR. You require the licence number in order to install Transit/TermStar. The licence number defines the product versions, additional functions and optional filters that you have purchased. For time-limited licences, the licence number also includes the period of time in which you can use Transit/TermStar.

▲ You generate the activation key yourself in the Activation Center. You require the activation key to activate Transit/TermStar. The key links the purchased licence to your computer.
Uninstalling and deactivating Transit/TermStar

In this chapter, you will find out how to uninstall and, at the same time, also deactivate Transit/TermStar. You are in the right place if you want to use Transit/TermStar on the new computer.

Tips for uninstalling

Take advantage of other users’ experiences by following these tips:

Check the status of your projects beforehand
After uninstalling, you can no longer use Transit/TermStar on your previous computer. Without Transit/TermStar, you may no longer be able to complete or deliver projects or translations.
You must therefore check whether projects still have to be completed before uninstalling.

If you have multiple licences: Note down the activation key in advance
In the Activation Center, it may be difficult to recognise which of your licences belongs to the deactivated Transit/TermStar installation. As a result, it may become complicated to update the correct licence.
Therefore, note down a part of the activation key before uninstalling the software or take a screenshot of the Information about Transit NXT window and print this out.
It is even better if a comprehensible comment about the user of the licence has been entered in the Activation Center during the activation. The Note field in the Activation Center is provided for precisely this purpose.

Keeping the removal key safe
Without the removal key, you cannot activate and permanently use Transit/TermStar on the new computer.
You should therefore open the file that contains the removal key and print this out. Remember to copy the file to an external data medium before you no longer have any access to your previous computer.
To uninstall Transit/TermStar, proceed as follows:

1. Exit Transit/TermStar.

2. Start the Windows Control Panel for programs:
   - Windows 8: Go to the Windows Start menu and select **Control Panel | Programs**.
   - Windows 7 / Windows Vista: Go to the Windows Start menu and select **Control Panel | Programs and Functions**.
   Windows displays all of the programs that have been installed.

3. Right-click on **Transit NXT** or **TermStar NXT** and select **Uninstall** or **Remove**.
   The installation wizard displays the following window:

   ![Image of installation wizard]

4. Select **Remove** and select **Next** to confirm.
5 Ensure that **Deactivate Transit NXT** has been selected.

The installation wizard displays the folder and file in which the removal key is being saved.

Ensure that you can find the file again when you require the removal key.

We recommend that you take note of the folder and file name, or take a screenshot of the window and print this out.

6 Select **You are going to remove Transit NXT from your computer**... and select **Next** to confirm.
Wait until the end of the uninstall process. The installation wizard then displays the following window:

7 Select **Finish** to confirm.

Transit/TermStar has now been uninstalled and deactivated. You can use the removal key to release the licence in the Activation Center (⇒ *"Releasing the licence"*, page 12) and reactivate it on the new computer at a later point (⇒ *"Activating Transit/TermStar on a new computer"*, page 15). You must therefore make sure that you do not lose the removal key.

**Did you forget to deactivate Transit/TermStar?**

If, when uninstalling the software, you forgot to deactivate Transit/TermStar, you will not have a removal key. Without this key, you are also unable to release the licence and use it on another computer.

In order to get this removal key, proceed as follows:

1 Reinstall Transit/TermStar on your previous computer.
   
   To install Transit/TermStar NXT, see the document ⇒ *"Transit/TermStar – Installing and starting for the first time"*.

2 Uninstall Transit/TermStar again (⇒ *"Uninstalling and deactivating Transit/TermStar", page 6*).
   
   This time, make sure that **Deactivate Transit NXT** has been selected.
Deactivating Transit/TermStar

In this chapter, you will find out how to deactivate Transit/TermStar. You are in the right place if you want to use Transit/TermStar on the new computer without removing the installation from the previous computer.

Tips for deactivating

Take advantage of other users' experiences by following these tips:

- **Check the status of your projects beforehand**
  After deactivating, you can no longer use Transit/TermStar on your previous computer. Without Transit/TermStar, you may no longer be able to complete or deliver projects or translations. You must therefore check whether projects still have to be completed before the deactivation.

- **If you have multiple licences: Note down the activation key in advance**
  In the Activation Center, it may be difficult to recognise which of your licences belongs to the deactivated Transit/TermStar installation. As a result, it may become complicated to update the correct licence. Therefore, note down a part of the activation key before the deactivation or take a screenshot of the Information about Transit NXT window and print this out. It is even better if a comprehensible comment about the user of the licence has been entered in the Activation Center during the activation. The Note field in the Activation Center is provided for precisely this purpose.

- **Keeping the removal key safe**
  If you do not have a removal key, you cannot activate and permanently use Transit/TermStar after you have replaced the computer. You should therefore save the removal key in a file and print it out. Remember to copy the file to an external data medium before you no longer have any access to your previous computer.
Carrying out the deactivation

Deactivate Transit/TermStar as follows:

1. Start Transit/TermStar.
2. Click on the information symbol  to the right in the ribbon bar.
   Transit/TermStar displays the following window:
   
   ![Transit/TermStar window]

   3. Click on **Deactivate Transit**.
   Transit/TermStar displays the following message:
   Do you really want to deactivate the software?
   
   4. Confirm the message by clicking on **Yes**.
   Transit/TermStar displays the removal key that you can use to release the licence in the Activation Center.

   ![Removal key window]

   5. Click on **Save as**.
   Transit/TermStar suggests that you save the removal key in the STARRemovalKey.txt file in the My Documents folder. Confirm this file or
define another file. Ensure that you can find the file again when you require the removal key.

We recommend that you also print out the removal key or take a note of it.

6 Select **OK** to close the **Software deactivated** window.

7 Close the **About Transit NXT** window by clicking on **OK**.

Transit/TermStar is now deactivated. You can use the removal key to release the licence in the Activation Center (⇒ "Releasing the licence", page 12) and reactivate it on the new computer at a later point (⇒ "Activating Transit/TermStar on a new computer", page 15). You must therefore make sure that you do not lose the removal key.

---

## Releasing the licence

In this chapter, you will find out how to release the licence for your previous computer. You are in the right place if you have deactivated Transit/TermStar on your previous computer and want to use it on a new computer in the future.

### What you need here

To release the licence, you require the following:

▲ **Removal key**

Transit/TermStar creates a removal key when you deactivate Transit/TermStar on your previous computer (⇒ "Uninstalling and deactivating Transit/TermStar", page 6 or ⇒ "Deactivating Transit/TermStar", page 10). You require the removal key in the Activation Center to release the licence that is no longer needed.

If you can no longer find the removal key, look for the `STARRemovalKey.txt` file in the Windows standard folder Libraries | Documents | My Documents. The installation wizard usually saves the removal key in this folder.

▲ **Login details for the Activation Center**

To log in to the Activation Center, you must enter your login details. You can find your login details in the e-mail containing the licence information that you received from STAR.

If you have changed the password, use the new password. If you have forgotten your password, you can have it sent to you by e-mail (⇒ "Forgotten your password?", page 15).
Releasing the licence for your previous computer

To release the licence that you no longer require for the previous computer, proceed as follows:

1. Open the Activation Center in your browser (http://activate.star-group.net).

   Your browser displays the login page of the Activation Center:

   ![Activation Center Login Page]

   Enter your login details (Username and Password) for the Activation Center (☞ "Login details for the Activation Center", page 12).

   Select Login.

2. Click on Orders in the page header of the Activation Center.

   The Activation Center displays your orders and licences:

   ![Activation Center Orders Page]

   The Activation Center displays how many licences are available for each product.

   In our example (first line): Three licences for Transit NXT Professional

3. In the line for the product that you want to release, click on licences.

   The Activation Center displays the licences that are already in use:

   ![Activation Center Licences Page]

   Status 2 of 3 licences currently activated for this order.

© 2015 STAR AG
In the line for the licence that you want to release, click on the blue minus sign (−).

The Activation Center also displays the Removal code input field:

6 In this field, enter the removal key that you received when you deactivated Transit/TermStar (⇒ "Uninstalling and deactivating Transit/TermStar", page 6 or ⇒ "Deactivating Transit/TermStar", page 10).

7 Click on Remove license.

The licence is released. The Activation Center only displays other licences that are still being used.

8 Click Log out in the page header to exit the Activation Center.
Activating Transit/TermStar on a new computer

Transit/TermStar NXT must be installed on the new computer before you can activate it. For information on how to install Transit/TermStar NXT and start it up for the first time, refer to the document “Transit/TermStar – Installing and starting for the first time”.

You can use Transit/TermStar for 30 days on the new computer before you need to activate the software. After this period, you must activate Transit/TermStar before you can continue working. To find out how to generate the activation key and activate Transit/TermStar NXT, see the document “Transit/TermStar – Activating the software after installation”.

You can find this and other installation documents on our website www.star-group.net in the following area: Downloads | Transit & TermStar NXT | Quick Installation Guides.

Forgotten your password?

If you have forgotten your password for the Activation Center, you can have it sent to you:

1 In the log-in window, click on Forgot password?.
   The Activation Center displays the following window:

   [Image of the Activation Center window]

   - Enter the user name and e-mail address with which you are registered at STAR.
     - You can find the user name in the e-mail containing the licence information that you received from STAR.
     - The registered e-mail address is the address to which the licence information was sent.

2 Enter the user name and e-mail address which you are registered at STAR.

3 Click on Send password.
   The Activation Center sends the password to the e-mail address that you entered. If you do not receive the e-mail immediately, check your spam folder in case the e-mail has been sent there.
Transferring the existing Transit installation to your new computer

In this section you will learn how to transfer your existing Transit installation including your projects and user-defined settings to your new computer.

We strongly recommend to use identical installation paths
When installing Transit/TermStar NXT on the new computer, make sure to install the application and configuration data using the same path as on the old computer, e.g. C:\Users\Public\Documents\Transit NXT.

The application and configuration data include the Transit folders \config, \projects, \db, \spell, \log, and \help.

This is important because the absolute path of the respective working folder is saved in your projects (.prj).

If the paths of the working folders do not correspond any more, you will have to update them for each “old” project you want to open or add as reference using the new installation.

WebTransit: Disable automatic synchronisation
If you have used WebTransit in your old Transit installation, disable automatic synchronisation for all connections. By doing so, you avoid new jobs from being received.

Backing up your Transit data
First, make sure that the latest Service Pack or Update of Transit/TermStar NXT is installed on your old computer.

We recommend that you backup the Transit/TermStar data located on your old computer on an external data storage. This way you can always access your current Transit/TermStar data.

For information, please refer to the “Backing up Transit/TermStar data” document that is available on our website www.star-group.net in the following section: Downloads | Transit & TermStar NXT | Quick Installation Guides.

Transferring the Transit installation
After installing the latest Service Pack or Update of Transit/TermStar NXT on the new computer proceed as follows:

1. Delete the following Transit folders of the Transit installation on the new computer: \config, \projects, \db, \spell

2. Copy the following Transit folders of your old installation to the installation on the new computer: \config, \projects, \db, \spell

If you want to continue using the same Transit user name with your new installation, you do not have to take any further action.
If you want to use a new Transit user name with the new installation, proceed as follows:

– Delete the `users.ini` file from the `\config\users` Transit folder.
  Starting Transit/TermStar NXT for the first time, you are asked to enter a user name.

– Specify your new Transit user name.
  In the `\config\users` Transit folder, Transit/TermStar NXT creates a new folder named after the new user name.

– Delete the folder named after the new user name and rename the folder named after the old user name, meaning, name it after the new user.

### Centrally stored working folders / reference material
If you have centrally stored your working folders and/or reference material on the old computer (e.g., D:\MyProjects and/or D:\MyRefMat), please also copy these folders to the identical paths.

3  Connect user-created TermStar databases via the resource bar in Transit NXT ([Dictionaries resource](#) | [Dictionaries/databases](#) | [Connect database](#)).

   The name of the ODBC connection and the name of the dictionary should correspond.

   The following databases do not have to be connected:

   – TermStar NXT (`termstar_nxt.mdb`),
   – TermStar NXT Check (`termstar_nxt_check.mdb`),
   – TermStar NXT Received (`termstar_nxt_received.mdb`).

   Now, you have transferred your existing Transit installation completely to your new computer.

4  If you use WebTransit, check whether your connections are working correctly.

   If not, check whether the folder for the ZIP transfer is in the location specified in the connection settings (or update the path in the connection settings).

   Otherwise, you will have to check your internet settings (proxy server settings of the Internet Explorer and firewall settings).

### Updating the working folder
If it is not possible to install the application and configuration data under the same path as on the old computer, you need to update the path of the working folder:

▲ when you want to open an “old” project and

▲ when you want to add an “old” project as reference material.
Transferring the activation to a new computer

In this case, Transit NXT displays the following window:

1. Select **Create new working folder**.
2. Transit NXT displays the following window:

3. Click **Change**.
   Transit NXT displays the **Select working folder** window.
4. Select the working folder at its current storage location.
   Transit NXT updates the path of the working folder in the project (.prj) and is now able to open the project or add it as reference material.
Transferring the existing Transit installation to your new computer
